

Success story: Logival

Logival was created in 2007 by doctors with specialist computer skills and offers a comprehensive IT solution for medical groups and surgeries thanks to cutting-edge IT knowledge and a perfect understanding of what the medical field entails. Mediway software is the result of all this expertise. It provides faultlessly reliable electronic medical records. To achieve its commitments in the areas of security and data continuity in particular, Logival makes it a point of honour to use technology which guarantees the reliability of its IT solutions.

Logival SA

“ dbi services provided us with an expert opinion ”

“The way dbi services was able to guarantee a high-performing PostgreSQL configuration was essential to us. Their DMK Management Kit* made the roll-out particularly fast and reliable.”

* [DMK Management Kit](#)

	<p>CHALLENGES</p> <p>“In our specific context of computer management and monitoring of medical records, it is crucial that IT solutions are reliable. Data security and availability must be guaranteed. For choosing the most appropriate technology for a new service project, we therefore consulted dbi services.”</p>
	<p>SOLUTION</p> <p>“Open source solutions were not a new topic for us, but with dbi services’ recommendations we chose PostgreSQL. This technical solution was quick to roll out and simple to administer. It is an ideal response to our technical expectations: it is free and open source with a really responsive community behind.”</p>
	<p>RESULTS</p> <p>“We installed PostgreSQL and achieved tests with help from dbi. The configuration parameters were chosen very deliberately. Data security and availability are guaranteed and we also have solid start-up / shutdown procedures for the whole cluster (node management) and for the log file management.”</p>
	<p>ADDED VALUE</p> <p>“Thanks to dbi, our PostgreSQL configuration has been approved and documented. We used their DMK Management Kit tool to automatically roll out PostgreSQL and saved precious time. We now have robust, reliable infrastructure which meets our needs.”</p>
