

DMK Management Kit

The free tool for efficient infrastructure administration

The DMK Management Kit supports infrastructure administrators with standardised script compilations for the quick and reliable installation, maintenance and administration of databases and application servers.

The DMK tool enables you to carry out a wide range of administrative tasks with ease:

- Set up database environments
- Release and block DB components (start/stop)
- Set up and manage an Oracle WebLogic environment
- Automatically check relevant database settings
- Intelligently clean log files
- Remote access for viewing log files

Hervé Schweitzer
Chief Technology Officer

Managing infrastructures is what we do. Our DMK contains efficient tools for IT administrators and you can also use them now – without any licence fees!

What sets the DMK apart?

- No licence fee
- Platform-independent
- Automated best practice processes
- Easy to use
- Manufacturer support

How much does the DMK cost?

The DMK Management Kit does not entail any licence fees. dbi services uses this script compilation for the efficient and consistent deployment of its customer infrastructures and now also provides the kit to external database administrators.

The initial installation of the DMK must be carried out by dbi services (charged). Afterwards, you can upgrade existing installations or install the kit onto new servers independently.

Is any support available for the DMK?

dbi services offers you professional support for the DMK Management Kit. This can be adjusted to suit your needs with its three different service level agreements (SLAs).

What does the DMK have to offer?

The DMK contains a range of tools for infrastructure environments on Oracle, SQL Server, MySQL, PostgreSQL, NoSQL, Middleware, WebLogic and dbiTail:

- Monitoring / high availability
- Performance analyses, structure reviews
- Database setup and configuration
- Backup and restore
- Management, maintenance and security audits
- Local and remote access to log files
