

## OpenDB Appliance

Provides functional virtual database environments in seconds

### What makes OpenDB Appliance stand out?

- Professional basis for licence-free databases
- Ready-to-use
- Automated processes according to best practice standards
- Monitoring and maintenance with free DMK
- Manufacturer support

OpenDB Appliance is a complete image of a VMware virtual machine, prepared for running free databases, with the Linux operating system. It is configured by dbi specialists according to best practice and updated on an ongoing basis.

This enables new, functional databases to be provided quickly and easily:

1. Import OpenDB Appliance into your VMware ESX environment
2. Adjust parameters such as host name, network configuration, disk size, etc., as appropriate
3. Select the desired process (connect DB Home, set instance, stop operation, delete DB)
4. Start the automated installation process and you are ready

**With the OpenDB Appliance you benefit from a highly efficient and professional installation of licence-free databases on a virtual server.**

**Daniel Westermann**  
Technology Leader  
Open Infrastructure

“Thanks to OpenDB Appliance, the ‘click, hope and pray’ approach is a thing of the past! Use the tool that our specialists have developed especially for the daily work of our customers.”

### How much does OpenDB Appliance cost?

You can purchase the OpenDB Appliance user licence, including delivery, configuration and installation, for the attractive, one-off fixed price of CHF 1990.00, which is free of charge if you opt for a SLA contract dbi FlexService for the related database on this appliance. The price also includes the installation of the free DMK Management Kit (DMK) that forms an essential prerequisite for monitoring and maintenance.

### Will I receive updates and support?

dbi services offers professional support for OpenDB Appliance with three different service level agreements (SLAs). These SLAs contain six-monthly updates, encompassing VM image configuration and new functions.

### What can OpenDB Appliance do?

- Automatically install licence-free databases in virtual environments (VMware ESX)
- Products: PostgreSQL. (Additional products such as MariaDB, MongoDB, Cassandra, etc. coming soon)
- Several instances on one database home
- Several homes for the same product version
- DMK Management Kit (DMK) included for efficient infrastructure management
