

Precitrame Machines SA

Precitrame Machines SA has been developing state-of-the-art automated production equipment since 1997. A research and development team of around 100 people works on made-to-measure machine concepts for high-tech industries.

By combining the expertise of Arcentis and dbi services, Precitrame Machines SA has been able to benefit from high-performing ECM and a robust open source infrastructure as well as comprehensive training, allowing the company to work independently.

Precitrame Machines SA

Infrastructure at your service.

	<p>CHALLENGES</p> <p>The Alfresco ECM for Precitrame Machines SA did not function optimally, making it complicated to use. Arcentis intervened to resolve the problem then updated Alfresco to version 6. This update involved deploying containers. At the time, the client did not have the means necessary to manage this type of deployment.</p>
	<p>SOLUTION</p> <p>Arcentis had created a Kubernetes cluster on pre-existing infrastructure. The client therefore already had SUSE licences and was naturally interested in a solution from the same supplier. Working alongside dbi services open infrastructure experts, Arcentis carried out a conclusive test with SUSE 'Containers as a Service' (CaaS) product key.</p>
	<p>RESULTS</p> <p>The Kubernetes cluster was successfully installed. Alfresco has been updated to version 6. What is more, Precitrame Machines SA's ECM and other services are now hosted on SUSE CaaS.</p>
	<p>ADDED VALUE</p> <p>Arcentis has changed its infrastructure and successfully updated Alfresco. Today, Precitrame Machines SA has an ECM which works optimally. Arcentis also conducted coaching and training so internal users can work independently.</p>

Our ECM and our infrastructure are strong, fast and reliable due to the combined involvement of Arcentis and dbi services. A bonus was the comprehensive training provided by Arcentis which allowed our teams to work independently.
